**PROTECTS
SURFACES UP TO
10 YEARS / 6 YEARS**
Vertical / Horizontal

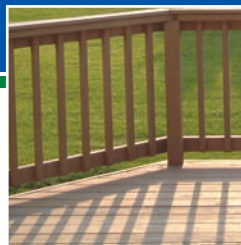

Seal-Once is the waterproofer of the future. Our NANO technology has produced the most advanced and longest lasting waterproofer on the market today. You will be pleased you chose Seal-Once.

Do Your Part, Buy Green!

Seal-Once, as seen on television!

Tips for applying Seal-Once clear or tinted formulas to your deck.

- For new pressure treated decks, allow wood to dry for three months.
- Remove dirt, grease, mold and mildew with appropriate cleaner and a pressure washer if necessary.
- Do not apply in direct hot sunlight. An exception would be to dampen deck with water before applying.
- Apply with brush or pump-up garden sprayer on medium to coarse setting.
- Deck will prevent water absorption in 48 hours.
- For previously treated decks, wait 1 to 2 years prior to applying Seal-Once. Old treatment does not have to be removed. To test for readiness, place a small amount of plain water on the deck and wait up to a half hour. If the water penetrates, then it is ready for Seal-Once.
- Apply a minimum of 2 coats wet on damp. Do not allow to dry out between coats.
- Covers 150 square feet per gallon for 2 coats.

Your deck will be one of kind!

GREEN • ZERO VOCs

WORLD'S ONLY ECO-FRIENDLY WATERPROOFER

SEAL-ONCE

Wood, Exotic Wood, Concrete, Masonry, Composite Decking & Marine Formulas

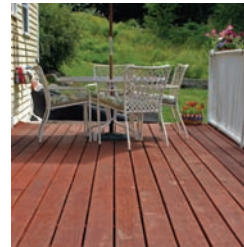

Will not harm fish, plants or pets. No need to cover plants, grass or windows. Will not change color, streak or yellow. Suitable for all climates, can be applied at 35°F and up.

Seal-Once™ Total Wood Protection was applied to this white pine fence 20 years ago. Season after season, the wood has been remarkably preserved. The clear formula reveals the natural gray patina, weathering without any cracking or warping of the wood.

SEAL-ONCE™ waterproofers for wood, exotic wood, concrete and masonry, and composite decking provide long-lasting protection against water and UV damage. The Seal-Once eco-friendly product line is water-based, non-flammable and contains zero VOCs, toxins or irritants. Choose from clear or tinted original formulas or specialized marine and industrial grades.

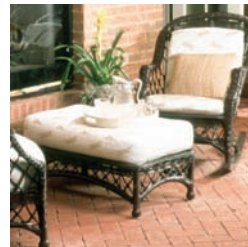

TOTAL WOOD/ EXOTIC WOOD FORMULAS

For all wood surfaces from soft pine to Brazilian IPE and other tropical woods as well as pressure treated. Use on decks, siding, fences, exterior wood, outdoor furniture, chairs, gardens, planters and play structures to protect against mold, mildew, cracking, splitting, warping and twisting.

- Can be painted or stained
- Can be applied to a damp surface
- Protects from freeze/thaw cycles
- ASTM Test for Mold & Mildew D3273 and D3274

CONCRETE & MASONRY

For all concrete, masonry, pavers and stucco surfaces. Use on walkways, driveways, garage floors, curbs, steps, chimneys, retaining walls, planters, and basements to

protect against mold, mildew and reduce spalling.

- Penetrates concrete up to 1"
- Resistant to salt and chlorides, and freeze/thaw
- Can be applied to damp and green concrete & masonry
- Can be applied on internal surfaces
- ASTM test c140-02- Water Absorption; ASTM test 672/C672M-98 Resistance to Deicing Chemicals; ASTM test 1869-98 Moisture Vapor Emission

COMPOSITE DECKING

Protect your investment and restore the beauty of your composite deck with Seal-Once. Penetrates all composite decking to protect against mold, mildew and water absorption.

- Clear formula allows composite decking to maintain natural color
- Stain resistant

MARINE FORMULAS

Choose "fish-friendly" Seal-Once Total Wood or Concrete & Masonry Marine formulas for specialized applications over and around fresh or salt water.

Use on docks, decks, piers, siding, retaining walls, railings, walkways, ramps, pavers and more.

TINTED FORMULAS

Seal-Once fade-resistant transparent tints mix easily into our basic formulas to add color and depth to your surface while providing superior protection.

Color swatches are approximate.
